### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Kirsten Grueneberg on July 17, 2008.

The application has been amended as follows:

In the first paragraph of the specification, the following statement should be included: "This application is a divisional of U.S. Patent Application. No. 09/859386 filed May 18, 2001, now U.S. Patent No. 6,617,018, entitled FUNCTIONAL FILM, the entire disclosure of which is hereby expressly incorporated by reference."

### **REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance:

The closest prior art of reference found is taught by Oka et al. (US 5,976,297) in view of Bilhorn (US 4,197,635).

Oka et al. teach forming an antireflection film, where a functional coating dispersion (2), comprising a solution of particles such as zinc oxide ( $\text{ZnO}_2$ ) without resin, is applied to a release film (1), applying an adhesive or uncured resin layer (4) over the coating (abstract; column 2, lines 4-7; column 12, lines 7-8 and lines 24-25; column 53, lines 31-50). The coated release film is then press-bonded and transferred onto a

substrate (3) after the release film is removed thereafter (column 10, lines 49 - 65; column 55, lines 19-22; Figure 5).

Bilhorn teach applying a conductive coating (28), such as zinc oxide in a binder without resin, to a support (22), drying the coating, and then compressing the coating through a pressure nip (35) at ambient temperature, i.e. room temperature ( $\sim 25^{\circ}\text{C}$ ) (column 3, lines 8-31; column 10, lines 12-19; Figure 2), since the pressure exerted at a nip between two rollers together with the adhesive properties of a bonding agent is sufficient to compress the coating onto a support, without the necessity of elevating the temperature (column 4, lines 14-20).

After further search and consideration of arguments filed in the appeal brief, mailed on June 16, 2008, there are no teachings found in the prior art showing compressing a coating of particles that does not comprise a resin to form a functional film and then transferring the functional film onto another support.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
